Multithreading in java with example

```
1 class A implements Runnable{
2     public void run(){
3         for(int i=1;i<=5;i++){
4             System.out.println("Thread A "+i);
5         }
6     }
7 }
8 class B implements Runnable{
9     public void run(){
10        for(int i=1;i<=5;i++){
11            System.out.println("Thread B "+i);
12        }
13    }
14 }
15 class thread1{
16     public static void main(String args []){
17         Thread t1 = new Thread(new A());
18         Thread t2 = new Thread(new B());
19         Thread t3 = new Thread(new C());
20         t1.start();
21         t2.start();
22     }
23 }
```
